

Mindful Learning – Phase 1

User Profiles and Permissions

We will have different profiles with different permissions:

- Student
- Teacher
- Administrator
- System Administrator
- Study and Career Counselor (SYV)
- Special Education Teacher
- Internship Coordinator

Below is a proposal for permissions (inspired by Itslearning). Is there anything else we should consider?

We should also be able to customize permissions for individual profiles.

Examples:

- Angelina is allowed to make changes to the final exam list.
- Mirsada has access to a shared document with Anes in order to provide support during grading.

Search Box

Users should be able to search for various information, such as dates, students, teachers, or courses. Three characters should be sufficient to initiate a search.

- **Student:** The search should take us to the student's profile. It should be possible to search by first name, middle name, and last name.
- **Date:** We should be able to see which students have a course start or course end date on that specific date. The dates must be specific.
- **Teacher:** The search should take us to the teacher's profile, where we can click through to all their active students and courses. Completed courses should also be available if desired.
- **Course:** We should be able to see who the teacher is and which students are taking the course.

Users

Tab 1 – General

(Inspired by Itslearning and Alvis)

Here it should be possible to see:

- Contact information

- All information about the person being searched for
- Any comments from staff

For students, examples include:

- Need for support
- Sitting separately during exams
- Other relevant information

For staff:

- Whether they are on vacation
- Other relevant information

The system should clearly indicate if a student has been revised or has another type of deviation/exception.

Tab 2 – Study Plan

(Inspired by Alvis)

Here we should be able to see:

- Courses and course packages the student is studying
- Which teacher is assigned to each course
- The status of each course

The same information should be available on teachers' pages:

- Their active courses
- Students connected to each course

Different statuses should be available in a dropdown menu on student pages:

- Admitted
- Graded
- Withdrawal
- Not Started
- Revised

Tab 3 – APL

This tab should contain information about APL (workplace-based learning/internship) for students studying course packages.

This tab should not be available when searching for staff.

Tab 4 – Permissions

Here it should be possible to see what permissions a person has and, if necessary, change them.

Tab 5 – Documents

(Inspired by Alvis)

All documents uploaded by staff should be available here.

Examples:

- Action plans
- CVs
- APL contracts
- etc.

From every part of the page, users should be able to navigate to other relevant pages.

For example, if I am viewing a student's study plan and click on a course, I should be taken to a page showing all students connected to that course and the teacher responsible for it.

Tab 6 – Course Archive

All documents related to the course should be collected here, such as:

- Final exams
- Partial exams
- etc.

Courses

There should be a page where all courses are collected.

When placing newly admitted students into courses, we should be able to click a button (+ / Add). This should open a page containing all the information that needs to be filled in.

Can we retrieve data from Alvis so that students are placed automatically?

Course Placement

We start by selecting either a course or a course package. The relevant options will then appear.

Course

- First, select the course start date.
- Then select whether the student will study for 5, 10, or 20 weeks. The course end date should then be calculated automatically.
- Enter the student's:
 - Name
 - Personal identification number

- Phone number
- Email address
- In the next step, select the day on which the final exam will take place. Different teachers have different exam days. This could potentially be preset for each course. The goal is for the system to automatically calculate the final exam date.
- Check a box if the student requires additional support.
- Select whether the exam will be conducted on-site or remotely.

All municipalities except Upplands-Bro conduct exams on-site. This could potentially be registered automatically when the municipality is selected.

Course Package

- First, select the course start date.
- Then select the study pace:
 - 100%
 - 50%
 - 25%
- At this stage, it should be possible to choose whether the student will study the full course package or remove certain courses by unchecking them from a list.

The list should communicate with the final exam list and the APL list.

- After the above steps, the system should automatically calculate the start and end dates for the courses included in the course package.
- The student should automatically be registered in the APL list.

There should be a checkbox indicating whether the student has already completed an internship through another school.

The certificate should be uploaded and automatically placed in the Documents tab on the student's page.

- The remaining steps should follow steps 3–6 above.

Changes to Studies

Withdrawal

When we need to register a withdrawal, we search for the student using the search box, locate the course that should be discontinued, and change its status in the dropdown menu to **Withdrawal**.

Once this is done:

- An automatic confirmation is sent to the teacher and appears under notifications.
- The student is removed from the final exam list and APL list for all courses from which they have withdrawn.
- The student is marked in a way that makes it easy to see that they have withdrawn and/or is moved to a separate withdrawal list (inactive students).

If the student returns, it should be easy to find them in the inactive student list and reactivate them.

Revisions

Sometimes students change their study pace or remove courses from a course package. In these cases, their study plan needs to be revised.

The following should then happen:

- The student's study plan is rescheduled.
- The final exam list is automatically updated whenever changes are made to the study plan.
- The APL list is automatically updated with the new course end date whenever changes are made to the study plan.
- An automatic confirmation containing the new study plan and course end dates is sent to both the teacher and the student.

Inactive Students

When placing new students into courses, it may be an old student returning.

Students who have withdrawn or completed a course and want to study something else often return.

The system should recognize that the student already exists and automatically fill in all their information.

A list of the student's previously completed courses should appear, allowing us to select which courses they should be enrolled in again.

Alternatively, if it is a completely new course, we simply enter the new course.

APL

The APL list should have two tabs.

Tab 1

This is still primarily a list, but students should automatically appear here.

The Internship Coordinator should be able to enter information about what the student is looking for and upload the student's CV and APL contract to the student's own page.

We should be able to choose from six different color codes and filter by them. For example, we should be able to display all students marked blue.

- **White:** New student
- **Blue:** Contacted and informed about APL
- **Yellow:** APL in progress

- **Purple:** Needs follow-up
- **Red:** Warning – internship ending soon. This should automatically become red when there are X number of weeks remaining.
- **Green:** Internship completed

These statuses could potentially be implemented as checkboxes or dropdown selections.

Tab 2

All students marked green should appear here.

In this list, we should be able to enter:

- Contact information
- Internship period
- Whether the APL contract has been uploaded to the platform

Tab 3 – APL Contracts

Files related to APL contracts.

Grades

Teachers should receive an automatic reminder when students reach the end of their courses and need to be graded.

There should be a grading page where each teacher automatically sees the students who need to be graded.

Teachers should be able to grade their courses by selecting a grade from a dropdown menu: **A–F**

The grade must be justified with a short free-text explanation from the teacher.

There should also be an option to add comments after selecting the grade.

All fields except comments should be mandatory.

National Exams

For English, Swedish, and Mathematics, points from national exams need to be registered.

These should also be possible to register here.

See the templates for grading documentation.

The grading scale changes annually, so the System Administrator must be able to modify it.

For example:

- HT24
- The grading scale applicable to HT24

Once teachers have completed the grading, they must lock the grades before proceeding.

Administrators should automatically receive a notification when grades have been locked so that they can enter the grades on the municipalities' pages.

If a teacher needs to unlock a grade, the System Administrator/Administrator should be able to unlock it for them.

Additional Feature: Signing Grade Catalogs

We currently use a service called Scrive.

We upload the PDF files to the platform one at a time and send them to the teachers for digital signing.

Action Plan

If a teacher has registered an **F** grade for a student, they should automatically receive a reminder under Notifications that they need to create an action plan.

The reminder should not disappear until the action plan has been completed.

The action plan should be presented as a questionnaire that the teacher needs to complete.

Once completed, a PDF should automatically be generated and made available for download from the platform.

The System Administrator should be able to modify the questionnaire.

Examinations (Prövningar)

There should be a page where all examination students are collected.

They should also be searchable through the search box.

Examination students should be able to book an examination through our website and pay for it there.

It should be possible to download all examination registrations and simply drop the file onto the page, after which the examination students are automatically registered.

Manual changes should also be possible.

Students should initially be registered on an interest list.

When there are 4–3 weeks remaining before the final exam for the month the student wishes to take the examination, the examination student should automatically appear in the relevant teacher's notifications.

The teacher should be able to choose:

- Accept the student for that month
- Move the student to the following month
- Reject the student

There should also be a comment field where the teacher can provide a reason.

Information Required During Registration

- Name
- Personal identification number
- Phone number
- Email address
- Address
- Course in which they want to take the examination
- Month in which they wish to take the examination
- Municipality where their grade should be registered
- Teacher responsible for the examination, selected from a dropdown menu

Once the examination student is registered in the system, we should be able to check whether they have collected their study material.

This applies only to **SVE/SVA 1 and 3**.

We should also be able to enter the date on which they paid for the examination.

This information should also be visible on the final exam page.

If a teacher approves the examination student, the student should automatically be added to the teacher's final exam list for that month.

If a teacher cannot accept the examination student, the student should automatically be moved to the following month according to the teacher's selection.

Final Exam Page – Calendar

Students should automatically appear on the final exam page once they have been approved for an examination or registered as a student in a course.

They should also be automatically removed if any changes occur.

The final exam page should be displayed as a calendar, one month at a time.

Each teacher should be displayed on the date they have been assigned for final exams.

Each teacher should also have their own color in the calendar so that they can easily identify themselves.

When clicking on a teacher's name in the calendar, a list of all students scheduled to take an exam on that date should appear.

There should be a checkbox to indicate whether each student attended the exam.

The page should also show whether a student has any special accommodations for the final exam, such as:

- Extra writing time
- Computer
- Sitting separately

Teachers should have permission to change exam dates themselves.

Otherwise, all schedule changes should be handled by the administration.

The System Administrator/Administrator should be able to select where the final exam takes place, for example:

- Akalla
- Sollentuna

They should also be able to select the room.

There are 7 locations/rooms in total.

Sollentuna

- 308
- 310
- Small Room
- Aniara
- Kung Agnes

Akalla

- Vision
- Hässja
- Arkarli
- 316

SYV – Study and Career Counselor

The SYV should be able to:

- View students
- Schedule meetings with students in the calendar
- Add information to the student's profile/card
- Revise the student's study plan

Special Education Teacher

The Special Education Teacher should be able to:

- View students
- Schedule meetings with students in the calendar
- Add information to the student's profile/card
- Add accommodations for final exams

Finance and Reports

There should be a statistics/reporting page where users can select different options for the information they want to retrieve.

- Once grades have been assigned, we should be able to see how much revenue each municipality generates per course.

We should also be able to generate a monthly revenue forecast.

- Generate statistics on the number of students.

Examples:

- Month
- Teacher
- Course
- Term
- etc.
- Generate statistics on the number of withdrawals.
- Generate statistics on the number of F grades.
- Generate a grade distribution/grade curve for the school by course.
